BUBBLE CHAMBER WITH AN IMPULSE MAGNETIC
FIELD. [1961] 40p. (Russian text included) 2 refs.
Order from LC or SLA ml\$3.00, ph\$6.30

UCRL Trans-519

Trans. of mono. Puzyr'kovaya Kamera s Impul'snym
Magnitnym Polem, Moscow, 1959.

This paper describes the structure of a propane bubble
chamber 46 x 21 x 10 cm in size with an impulse mag-
netic field. The chamber works with a 10-second cycle.
The magnetic field has the form of a damped sinusoid
with the period ≈ 25 milliseconds and the maximum
amplitude ≈ 10000 gauss. The variation of the maxi-
mum value of the field from cycle to cycle does not
exceed 1%. The space nonuniformity of the field does
not exceed 10%. (Lawrence Radiation Laboratory
abstract)
